Projects

Bus tracking (web and app)

<http://dygon.me/> 📅 February 2026 - Present

- Developed a real-time bus tracking system (web and mobile app) utilizing GPS data and mapping APIs, improving passenger experience and operational efficiency.
- Implemented a scalable backend with Node.js and PostgreSQL to handle concurrent requests from over 10,000 users, ensuring high availability and data integrity.
- Designed and deployed user-friendly interfaces using React for web and React Native for mobile, reducing passenger wait times by an estimated 20% and enhancing route predictability.
- Integrated third-party APIs for route optimization and traffic analysis, providing accurate ETAs and dynamic route adjustments.
- Managed end-to-end project lifecycle, from requirements gathering to deployment and maintenance, resulting in a 99.5% system uptime and positive user feedback.

Company website design

<http://basixera.tech/> 📅 February 2026 - February 2026

- Designed and developed a responsive company website, improving user engagement by 25% and reducing bounce rate by 15% through intuitive UI/UX design.
- Utilized HTML5, CSS3, JavaScript, and React.js to build a dynamic front-end, ensuring cross-browser compatibility and optimal performance.
- Collaborated with marketing and sales teams to integrate SEO best practices and content strategy, resulting in a 20% increase in organic search traffic.
- Implemented Google Analytics for continuous performance monitoring, providing data-driven insights for ongoing site optimization and feature enhancements.

portfolio website

📅 January 2025 - January 2025

- This portfolio website is a personal site created to introduce the developer, showcase skills, and highlight projects in a clean and modern way.
- It gives a quick overview of who the person is, what technologies they work with, and the kind of projects they have built.

- The design is simple, responsive, and easy to navigate, making it suitable for recruiters and collaborators to understand the profile at a glance and contact the developer easily.

Sign Speak

 January 2025 - January 2025

- Sign Speak is a web application that uses AI to recognize sign language gestures through a webcam and convert them into text and spoken audio in real time.
- It helps bridge communication between sign language users and non-signers by making interactions more accessible and inclusive.
- The platform is designed to be simple and easy to use while focusing on real-time gesture recognition and clear output.

COURSES

AI Tools Workshop at Be10x

 January 2025 - January 2025

Ethical hacking at RINEX

 January 2025 - January 2025

Introduction To CyberSecurity at CISCO

 January 2025 - January 2025
